SUMMARY

Software Engineer with 1+ years experience building scalable backend systems for enterprise platforms. Proficient in Java, ython, AWS, and PostgreSQL with expertise in backend and distributed systems. Experienced in REST APIs, shell scripting and SQL modeling.

EDUCATION

Indian Institute of Information Technology, Guwahati

Bachelor of Technology in Computer Science and Engineering (CGPA: 8.59)

Dec 2021 – May 2025

Guwahati, Assam

EXPERIENCE

MAQ Software

Noida, India

Software Engineer (Client: LinkedIn) | Python, Java, Kafka, REST APIs, PostgreSQL, Linux Jan 2025 – Present

- Architected and migrated event-driven system using Java, Kafka, and PostgreSQL in distributed computing environment, improving throughput by 20% and reducing memory usage by 45% across high-volume financial data streams.
- Designed automated data ingestion and partitioning workflows, reducing manual operational effort by 70% and accelerating CI/CD release cycles.
- Built an end-to-end incident automation system handling 100+ daily events via REST APIs and PostgreSQL, reducing manual intervention by 90%; deployed monitoring dashboards and alerting using AWS CloudWatch for observability.
- Delivered scalable, fault-tolerant backend services processing millions of events with 35% latency reduction; conducted code reviews and maintained high availability in Agile workflow using Maven and Gradle build systems.

Scholify

Remote

Software Developer Intern | Python, Django, JavaScript, Redis, PostgreSQL, AWS (EC2, RDS) Oct 2023 – Jun 2024

- Built a microservices-based backend using Python/Django and JavaScript, reducing API response time by 20% through query optimization and Redis caching.
- Integrated third-party payment gateway APIs for secure transaction processing, handling payment initiation, callbacks, and webhook verification workflows.
- Deployed and managed services on AWS EC2 with Auto Scaling; migrated PostgreSQL to AWS RDS for production-grade reliability.

PROJECTS

Nxacare – SaaS Clinic Management Platform | 🔄 [GitHub](#) | Node.js, GCP (Cloud Run, Cloud SQL, Memorystore Redis), Docker

- Designed a serverless backend with 15+ data models and RESTful APIs using Node.js, deployed on AWS Lambda and API Gateway with PostgreSQL (RDS).
- Implemented event-driven payment processing with secure webhook verification (Stripe, Razorpay) and automated cleanup via scheduled Lambda functions; containerized with Docker for CI/CD.
- Applied RBAC-based access control, JWT authentication, rate limiting, and cloud security best practices across all service endpoints.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, C/C++

Java Technologies: Spring, Struts, MyBatis, Maven, Gradle, JEE

Cloud & AWS: Lambda, EC2, API Gateway, IAM, CloudWatch, S3, RDS

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL Server

Scripting & Tools: Shell Scripting, Docker, Git, GitHub Actions, CI/CD, Linux/Unix

Core Concepts: SOA, Data Modeling, System Design, Test Cases, Distributed Systems

ACHIEVEMENTS

- [Amazon ML Summer School](#):Mentee at Amazon Machine Learning Summer School 2024.
- Problem Solving: Solved 250+ [LeetCode](#) and 400+ [GeeksforGeeks](#) problems; achieved a [Codeforces](#) rating of 1073.
- [COMSYS-23](#): Ranked top 20 in ML-based Kaggle Hackathon organized by Jadavpur University & IIT Mandi.
